Particulars
From

Chas. C. Jackson

Coronation

W. E. Reed was a visitor in Edmonton during the week.

E. W. Stranahan has been appointed as Manager of the local hotel. The interior of the hotel is now being thoroughly overhauled and kalsomined. The exterior will be painted white.

A. C. Lerch, of Edmonton, has accepted the position as Manager of the Local Supply Co.

McGirr & Co. have purchased the business formerly carried on by E. T. Stewart. The new firm will continue the business at the same location.

The Grinding Mill, which was donated to the Creek Valley Patriotic Fund, was sold for \$12.50. V. L. Hemenway also donated \$5.00 to the Fund.

R. A. N. Craig and family are spending the Easter holidays in Rouseau, Sask.

Mr. E. Bryor and Mr. Scott arrived from Oregon, last week and are staying with Mrs. D. Beamer. Mr. Bryor, who is a brother of Mrs. Beamer, intends settling in this district.

The debate on Tuesday night at the Literary Society was won by the negative side.

Messrs Dixon and Houston on the negative, Connah and McCulloch on the affirmative.

Mrs. Beamer entertained the Ladies Aid on Wednesday.

J. H. Lewis arrived from the States, yesterday, and will take up residence in the district.

Tom Harley brought in a carload of stock, yesterday.

The Bank will be closed today, Good Friday, and on Monday.

U. S. DECLARES WAR

By a vote of 82 to 6 the U. S. Senate passes the resolution declaring war with Germany.

The President call for a half a million army.

WANTED

A good milk cow, about 5 or 6 years old. Must be either just fresh or due to calf soon. Apply stating terms etc to T. H. Noad, Box 77, Monitor, or at Section 24-33-4.

NOTICE TO THE PUBLIC

I will have a full line of **DEERING MACHINERY** in Monitor not later than April 7th, and if you need Machinery of any kind dont buy until you see me. I want to show you good goods

"And what is she like? Dark? I. . .
 white—nut brown?"

"Fair—almost dazzlingly fair, and
 very lovely. With hair like brown
 and eyes—"

"And is she very devoted to you?"

Vanner cut in as Hugh paused.

"Devoted to me?" The other man
 turned from the table and looked
 at his friend with a curiously dazed

[illegible]

Sir John Simon, secretary for home affairs paid a tribute to the American commission of which Herbert C. Hoover is chairman. "We know," he said, "that Hoover's fund is being wisely and economically administered, without at the same time assisting our enemies."

The modern improvement in pills is Dr. Pierce's Pleasant Pellets. They help Nature, instead of fighting with her. Sick and nervous headache, biliousness, costiveness, and all derangements of the liver, stomach and bowels are relieved, prevented, cured.

Statistics show that during the four years of the association's work in Canada 36,000 persons have received the training. In the past year the number was 11,580, an increase of more than a thousand over the preceding twelve months period.

Applications for new creameries are coming from all parts of the province so it would look as if the farmers are beginning to realize that dairying is the most stable and one of the most profitable branches of farming possible.

"I haven't a definition on the tip of my tongue," replied the busy man, "but if you will look in the paper I daresay you will find a very good example of it under the general heading of 'Diplomatic Correspondence.'"

Hogs will require from ten to fifteen square feet of floor space each in a straw shed. Fifty hogs will require a shed about 20x30 feet in size. It is better to keep the hogs in a separate building from the cattle. The shed for hogs need not be more than four or five feet high. It is advisable to make the walls tight, using woven wire, or something equally good, so the hogs will not work out through the wall.

The Pinkham record is a proud and peerless one. It is a record of constant victory over the obstinate ills of women.

... ..

Greece gained its independence in 1830, when it was declared a kingdom under the protection of Great Britain, France and Russia.

A new map has just been is-
sued by the Railway Lands
Branch, Department of the In-
terior, Ottawa, which will no
doubt be hailed with pleasure
by the mercantile and profes-
sional community, it is entitled
the Judicial District Map.

The merchant, farmer or
other citizen of the West, as
well as the wholesaler of the
East, has oftentimes noted the paucity
of information with regard
to the exact location of the
points at which sittings of the
court are held, or at which title
deeds or other important docu-
ments of a similar nature may
be registered. This data is of
obvious benefit and importance
to all those having matters of a
litigious nature in hand. The
new publication shows, by an
elaborate, but not complicated
color scheme, the location of
both land registration and judi-
cial districts in the Provinces
of Manitoba, Saskatchewan and
Alberta. Certain towns con-
taining both Court House and
Registry Office are indicated on
the map by a circle of one color
while those containing one, but
not both of these conveniences,
are shown by a circle of a dis-
tinctive nature. Where the
county court as distinguished
from the supreme, or Court of
King's Bench, sits, this too is
indicated. Those places which
are the centres of land titles or
land registration districts, are
shown on the map by boundary
lines of different colors.

Application to the Superin-
tendent of Railway Lands
Branch, Department of the In-
terior, Ottawa, will secure a
copy of this useful map, gratis.

TRY THIS

When habits bore and customs pall
And every thing seems dull and jaded
When there's a sadness over all,
And all the joy of life is faded;
When you are not exactly blue,
But simply glum and willy-nilly,
Here is a helpful thing to do:
Just be real silly!

'Dignity's your greatest charm,
And if to lose the same you'd rue it,
If you consider grins a harm
And laugh's a crime, why then—
don't do it!
But Laughs and Grins are hardly
crimes
And when you're feeling dull and
mullish,
You'll find a benefit at times,
In being foolish.

Forever sober, stern and stiff,
It isn't right, it isn't reason!
Your life will be the brighter if
You'll act the motely for a season.
Though moods may come and moods
may go,
And though your path at times is
hilly,
You have a solace if you know
How to be silly.

No man really has the sense
of humor unless he knows when
not to be funny.

I have now a full range of
harness on hand.

Anyone needing Harness or
Horse requisites will do well to
look over my stock. There is
nothing more sure than that the
price of Harness will take a big
jump, either this month or next,
as the result of the abnormal ad-
vance in the price of leather and
all raw materials needed.

Practically all the large manufacturers
have to go to the tanneries to renew con-
tracts this month, and I am told on good
authority, that there will be an increase of
at least 18c per lb on last contract in Sept.

It is therefore easily seen what a dif-
ference this will make on a set of harness.

I, personally, expect to see harness ad-
vance 25% this summer.

Now, you all know what my prices were
last Spring; they will be practically the same
this Spring as long as Stock on hand lasts.

I have a large and varied stock of

Breeching Harness,	Harness, less breeching
Carriage Harness	Flame Straps, Halters
Single Buggy Harness	Breast Straps, Hames
Democrat Harness	Brushes, Curry Combs
Collars, Martingales	Sweat Pads, Lines
Snaps and all Harness Hardware	

Owing to the uncertainty of the
leather situation, my terms must
be Strictly Cash. Please note
this and do not ask for time.

Yours,
J. Hamer.

THE PLOW OUR HOPE

This was One of the Significant Phrases Recently
Used by the Prime Minister of Great Britain

There is Only One Way to Reduce the

HIGH COST OF LIVING That is to INCREASE PRODUCTION

Everyone cannot OPERATE A FARM,
but every GARDEN that is cultivated
this year will increase the Food Supply.

EVERY HEN YOU SET

will mean more chickens, and later MORE
EGGS. These will mean INCREASED
VITALITY IN CANADA. This may be THE
WAY IN WHICH YOU CAN HELP.

THIS SHOULD BE CANADA'S GREATEST YEAR OF NATIONAL SERVICE

The appeal comes to everyone. Whether
you live in a City, Town or Village or on a
Farm. No matter how small your garden
patch is, it will help.

The Alberta Department of Agriculture is at your service in this work. If you want
information or assistance, write to the Department, or write to the nearest School of Agriculture
or Demonstration Farm and your request will have immediate attention.

TEST ALL THE SEEDS YOU SOW

We will do this for you if you send in samples of the seed.

FARM HELP. If you require farm help, write to one of the following:—

Agent of Department of Agriculture, Board of Trade Building, Lethbridge.
Agent of Department of Agriculture, Dairy Commissioner's Office, Calgary.
Agent of Department of Agriculture, Office of Publicity Commissioner, Edmonton.

Let this year be one of

THE GREATEST EFFORT OF ALBERTA

We shall be pleased to mail you bulletins upon "Vegetable Gardening," "Poultry Rais-
ing" or any other agricultural endeavor, as well as to give assistance through the officials of the
Department.

HON. DUNCAN MARSHALL,
Minister of Agriculture

(Continued)

"The lot has fallen into his hand," he quipped, laying his hand lightly on Brentwood's shoulder. "I don't mean to imply that I envy you and that I hanker to change places with you. My own rock-bound coast is so near my heart that I never wish to leave it. But I own you are a lucky chap and your feet are well set on the ladder. Won't you take a town rather than this pleasant country-side?"

"In some ways, yes—in some no," Hugh picked up a handful of letters from his writing table, and turned them over absently. "The country makes a big appeal to one side of me; the other side, I confess, hankers after the life of a town. I and then my mind is getting a bit rusty here—and I feel too that I shall be glad of a chance of hospital practice again. I have every hope of getting on to the staff of the Badminton Hospital."

"Good!" Vanner's tones rang with hearty satisfaction. "In my mental vision I've always seen you at the top of the tree, and no one will be more glad than I shall to wave my hand to you when you are up there, and I'm glad to be able to come in person to wish you good luck. Why don't you let me offer hospitality to my strange patient and me, I felt I must come, even if it was only to see your old face again." And once more Dick's hand fell on his friend's shoulder. Hugh smiled, and signed to his friend to take an armchair on one side of the fireplace whilst he seated himself in the other.

"It seemed better to ask you to bring the man here," he said. "I can't let young Mrs. Merivale travel all the way back to Cornwall to see him. Poor soul, she has been through so much. Some indelible note in his friend's voice made the observant Dick glance at him sharply, but Hugh's face was turned towards the glowing fire in the grate—he seemed absorbed in his own thoughts, and he did not see that quick glance."

"I was very glad to spare her the journey," Vanner answered, "my patient—who as we had to call him something—we have named him John Lowndes, was quite fit to come here, and I built great hopes on his meeting with this Mrs. Merivale. I feel sure they must have been on the same ship—and in that case we shall soon know the truth about the poor fellow. This loss of memory is nothing short of a tragedy for him. His whole past has been entirely wiped out. He remembers nothing."

"Poor fellow," Hugh answered, speaking a truth absently, his eyes still fixed on the smouldering logs in the grate. "For his sake I sincerely hope Mrs. Merivale will be able to identify him, and if, as it seems reasonable to suppose, they were on the same ship, I should think she would certainly recognize the man. She is a very clever, intelligent woman."

"Is she any relation to the Miss Merivale who is going to honor you by becoming your wife?" Vanner asked, with a little chuckle, and a mischievous twinkle in his eyes. "If so I suppose you have had a good many opportunities of seeing her."

"Oh, yes, I have seen her fairly often," Hugh answered hurriedly. "Her husband was Daphne Merivale's first cousin. It is Daphne to whom I am engaged." Again something indefinite of constraint or awkwardness in his tones drew Dick's glance towards him. "I never saw Daphne Merivale. He died in Australia, and he had gone there long before I came to this part of the world."

"And this widow is to live with his people?" Hugh nodded. "Then she will be a daughter to them when you take Miss Daphne away. That seems an excellent arrangement, for I think you told me your fiancée was practically a daughter to her aunt and uncle. Are you thinking of being married before you go to Badminton?"

"Yes—oh, yes, I hope so," Hugh rose from his chair and turned his back upon his friend, went to the table and again fidgeted with papers there. "She is the dearest girl in the world, Vanner, and will see her in the morning. She will be at Badminton Manor when we take Mr. Lowndes over to see Mrs. Merivale. He spoke quickly, almost mechanically, but Dick, not appearing to notice the manner of his speech, answered:

"And what is she like? Dark? Lily white—not brown?"

"Fair—almost dazzlingly fair, and very lovely. With hair like bronze, and eyes—"

"And is she very devoted to you?" Vanner cut in as Hugh paused.

"Devoted to me?" The other man turned from the table and looked at his friend with a curiously dashed ex-

pression, a dull flush mounting to his forehead, why else am I so scarcely more than strangers?"

"You and the girl you are going to marry seem to me to be strangers. My dear fellow, what on earth do you mean?" Vanner asked, with the outspokenness of an old and tried friend. "We are talking of a cross purpose, and pulled himself together with an effort, and were asking me about Mrs. Merivale. You are speaking of Daphne."

"Certainly I was speaking of Miss Daphne. The other lady does not interest me, excepting as being the possible sister of poor Lowndes' possible. Tell me about your future wife, I am going to paint me a good portrait of her."

"I'm no good at word portraits," Brentwood again laughed with some embarrassment. "She is fair, and her eyes are grey—and she is kinder of me than I deserve. I think—and hope—I shall be able to make her happy."

"Perhaps you have her photograph somewhere? Your word painting leaves a great deal to be desired," Vanner said drily, and yet you surely have a photograph, show me that." Hugh laid across the table, and taking up a photograph in a silver frame, handed it to his friend, who looked at it long and silently.

"This woman is well worth caring for," he exclaimed after a moment's pause, "her eyes are so restful, there is something serenely sweet about her smile. And do you know what she has in her words, when man goes out to look for a wife, let him look for a girl who has that mother quality in her face. Girls who have it are men's best helpmates and comforters. Some body has said that a woman has to be mother as well as wife to her husband, and there has seldom been a truer thing said. We are just their little boys, you know, old man—as very wise plaything has told us."

"You speak as if you were quite experienced in the matter, have you?" Hugh began, but Vanner interrupted him.

"Even in a remote village one learns a good deal about human nature—woman's nature as well as man's," he added, "and I am made to be one of this world. However my small fund of knowledge is beside the question. I am glad you are going to keep your own eyes with a face like Miss Daphne Merivale. She will make the man she marries very happy."

"But is your Daphne strong enough to keep your own eyes with her?" he was the unspoken thought that ran through Vanner's mind as he spoke, "you don't speak of her with all the eagerness such a girl surely deserves. There is a certain coolness in your words about her. Is she throwing her pearls at feet not worthy of them?"

Hugh was back in his armchair, looking on at his friend, and Vanner's glance fixed itself upon his face—the face whose handsomeness could not hide a trace of undeniable weakness. The brown eyes were well set, and held a magnetic charm which never failed to make itself felt; the mouth, clear, chiselled, the smile delightful. But about the mouth and jaw were signs of indecision—just a hint of something unstable, insecure in the man's character, just a faint indication that possibly in a crisis of his life he might be tried and found wanting. But Vanner's observant glance saw it all.

"I shall hope to see your lady of delight tomorrow," he said, thrusting his hands into his pockets, and a faint indication that possibly in a crisis of his life he might be tried and found wanting. But Vanner's observant glance saw it all.

"I shall hope to see your lady of delight tomorrow," he said, thrusting his hands into his pockets, and a faint indication that possibly in a crisis of his life he might be tried and found wanting. But Vanner's observant glance saw it all.

and Vanner were Hugh's guests for the night, and whilst he slept peacefully in the spare room overhead, the two doctors sat far into the night, picking up the threads of friendship. The talk of the friends gradually drifted away from Lowndes and the Merivales to other topics—times, intervening cases, old acquaintances, hospital gossip, and Vanner noticed that Brentwood dropped quickly back into his familiar train of the new constraint utterly vanished.

(To be Continued)

Miller's Worm Powders not only exterminate intestinal and other worms, but they are a remedy for many other ailments of children. They strengthen the young stomach against biliousness and are tonic in their effects where the child suffers from loss of appetite. In feverish conditions they will be found useful and they will serve to allay pain and griping in the stomach, from which children so often suffer.

For Belgian Relief

Britain Faces Big Task of Caring for Them During the Winter

Inaugurating the committee of the city of London, which has been appointed to raise funds for the relief of Belgium, the Lord Mayor announced that the British committee had raised \$5,000,000 with which the American commission had purchased food, distributing it among the Belgians who remained in that country.

Lord Curzon, who was one of the chief speakers, said that this money had been exhausted and that it was necessary to raise \$1,250,000 monthly to feed the people during the winter. He pointed out that Germany was doing nothing for the relief of the inhabitants of the devastated country, and added that in this war, and we have and trust we will, every penny of indemnity which may be exacted should be handed over to Belgium for the recovery of the country.

Sir John Simon, secretary for home affairs, paid a tribute to the American commission of which Herbert C. Hoover is chairman. "We know," he said, "that Hoover's fund is being wisely and economically administered, and that the same time assisting our enemies."

THE HEART.

How It Acts In Everyday Life.

The human heart, in a healthy man, works like a pump, and it beats from long before birth until death, in an average lifetime, about seven million times, allowing of course, for the pauses. Every twenty-four hours this slight organ performs labor equivalent to lifting a ton of material eight feet and no human heart is ever at rest, and filled with poisons from diseased kidneys, the heart is not only starved, but poisoned as well. It soon becomes exhausted and unable to meet any extraordinary demand which may be made upon it. Supply pure blood; get the heart's action going; and the body is healthy. Dr. Pierce's Golden Medical Discovery purifies the blood, relieves the kidneys and tones up the alimentary canal. Give it daily, and the heart will continue to work till the natural end of life.

Berlin. Oct.—I have used Dr. Pierce's medicines and found them to be my perfect satisfaction. I had a stroke and got very bad. The doctor said no more, but I had to go to the hospital. I finally got the doctor and began taking Dr. Pierce's Golden Medical Discovery and Favorite Prescription. When I had taken about five bottles I commenced to notice a marked improvement, and in about one year and a half I was able, could do my own work. I really think these medicines saved my life as I was in very bad condition.

"I have used 'Pleasant Pellets' in my home for several years and have found them to be good. We keep them in the house all the time. I think I owe my good health of today to Dr. Pierce's medicine."—Mrs. Henry Hansen, 91 Victoria St.

The modern improvement in pills—Dr. Pierce's Pleasant Pellets. They help Nature, instead of fighting with her. They are gentle, and free of any harshness, costiveness, and all derangements of the liver, stomach and bowels are relieved, prevented, cured.

First Aid Courses for Schools

The St. John Ambulance association general executive has decided to arrange with preparatory schools throughout Canada to have first aid classes in their schools in the fall of this autumn and winter.

It will also endeavor to arrange with the military authorities for instruction of the units of the Expeditionary Forces in first aid work during their period of training in Canada.

Statistics show that during the four years of the association's work in Canada 35,000 persons have received first aid training, and last year the number was 11,580, an increase of more than a thousand over the preceding twelve months period.

Increase in Butter Output

Show Some Rapid Gains

The following table shows the very satisfactory increase in the production of butter at the Co-operative Creameries in Saskatchewan operated by the dairy branch, department of agriculture, for the summer months of the past year:

It will be noticed by these figures that the output for the five summer months of 1915 shows a gain of 25 per cent. over the same period of last year and a gain of 107 per cent. over the same period of 1914, which indicates a remarkably steady growth.

This butter has all found a ready sale at figures considerably above the market price, on account of its uniform quality and the excellent reputation gained for Saskatchewan government butter. Dairy Commission a report that he has lately been obliged to refuse several carload orders as he is desirous of retaining a supply to meet the local demand. This would indicate that there is practically an unlimited market for the best kind of butter.

So much is said and written at this time about the grain crop of the province, that the importance of the dairy industry is likely to be overlooked. A comparison of the two branches of farming, however, shows that dairying is making far more rapid gains than the grain crop. Statistics show that the average in grain crops this year amounted to 10,427,795 compared with 9,682,225 in 1914 and 9,246,100 in 1913. The average gain of 8.9 per cent. over 1913 and 6.2 per cent. over 1914, so a gain of 55 per cent. in the dairy crop over the grain crop compares very favorably.

Applications for new creameries are coming from all parts of the province. It is hoped that the farmers are beginning to realize that dairying is the most stable and one of the most profitable branches of farming possible.

Machine Guns

Most of the machine guns used in the war have been of the water-cooled type. The steam given off by the water, which is boiled through the heat of firing, is liable to betray the position of the gun, however, and for some time inventors have been busy inventing an air-cooled machine.

Their work has been successful, and the Lewis air-cooled gun is now used by British soldiers. The Lewis gun weighs only 25½ pounds, and it can be fired from a shoulder. It very much resembles, indeed, an ordinary rifle, but has a horizontal revolving barrel, instead of the trigger, and the barrel is four inches in diameter on the outside appearing much larger than that of a rifle. The gun is actuated by a sheath of aluminum, with radiating wings, like an electric fan. This sheath extends beyond the actual barrel of the gun.

As the gases, caused by the firing of the cartridges, come out of the barrel they act on these fans and drive them around, causing a continual draught of cool air to pass along the barrel.

The Lewis takes 48 cartridges at a time, but it can be reloaded in a few seconds.

"Just what is meant by 'dramatic'?" asked the seeker after knowledge. "I haven't a definition on the tip of my tongue," replied the busy man, "but if you will look in the paper I dare say you will find a very good example of it under the general heading of 'Dramatic Correspondence.'"

Minard's Liniment Co., Limited, Agents.—A customer of ours secured a very bad case of diphtheria in a valuable horse by the use of MINARD'S LINIMENT.

Yours truly,
W. H. ANDERSON

Information and Education

To appreciate what newspapers mean to a country we have only to look at Russia. In the war the Russian people, taken as a mass, did not read them. Now they are being urged to read a state paper not only to give the news, but as a means of popular education. People here sometimes do not recognize that papers are teaching them modern history, as well as many other things.—New York Tribune.

Straw Shed for Cattle

Construction of Straw Sheds Very Simple and Inexpensive

A stable that will protect from cold weather and storms may be constructed with little expense, where straw is plentiful. Each cow, if so fitted, needs about fifty square feet of floor space to allow for manure and feed alley, place for her to stand, and room to get behind her for milking, cleaning, etc. Young stock will need about half as much space. A barn 16x50 feet or our shed will furnish room enough for twenty cows and ten head of young stock. A straw shed for cattle should be seven or eight feet high. The construction of such buildings is very simple. Posts are usually set in the ground about twelve feet apart and strong timbers run on top of these with poles, close enough to each other to carry the straw and the timbers. Walls are constructed by making two walls two or more feet apart, and packing with straw. These walls may be made of poles, boards or woven wire, as desired.

Hogs will require from ten to fifteen square feet of floor space each in winter. They like to be in a square shed about 20x30 feet in size. It is better to keep the hogs in a separate building from the cattle. The shed for hogs need not be more than four or five feet high. It is advisable to make the walls tight against the ground. The straw should be equally good, so the hogs will not work out through the wall.

WOMAN IN TERRIBLE STATE

Finds Help in Lydia E. Pinkham's Vegetable Compound.

Cape Wolfe, Canada.—"Last March I was a complete wreck. I had given up all hope of getting better or living any length of time, as I was such a sufferer from female troubles. But I took Lydia E. Pinkham's Vegetable Compound, and in going to get my mail this letter of my twin boys two months old and growing fine. I surprised doctors and neighbors for they all know what a wreck I was."

"Now I am healthy, happy and hearty, and owe it all to Lydia E. Pinkham's Compound. Not many girls and women if you like, I think if more women used your remedies they would have better health."—Mrs. J. T. Cook, Lot No. 7, Cape Wolfe, P.E.I., Canada.

Because your case is a difficult one, and doctors having done you no good, do not continue to suffer without giving Lydia E. Pinkham's Vegetable Compound a trial. It surely has remedied many cases of female ills, such as inflammation, ulceration, displacements, tumors, irregularities, periodic pains, backache, and it may be exactly what you need.

The Pinkham record is a proud and peerless. Not many girls and women have a record of constant victory over the obstinate ills of women.

—It is that deal out despair. It is established fact that Lydia E. Pinkham's Vegetable Compound has restored health to thousands of such suffering women.

Why don't you try it if you need such a medicine?

Canada's Exports Exceed Imports

The balance of Canadian trade is being rapidly adjusted as a result of heavy exports of munitions and war supplies. The ratio at the end of August covering the first twelve months of the year stood at \$59,549,154 representing total exports and \$58,286,326 representing imports. For 1914 the total exports were \$48,844,591, and total imports \$57,664,162.

For the first year the total exports of merchandise were \$504,810,452, and imports of merchandise were \$415,813,053. The aggregate of customs duties in the first year of the war was \$78,857,044, a decrease of \$14,000,000 from the previous year. They were distributed as follows: Manufacturers, \$58,000,000; animal products, \$22,000,000; forest products, \$3,000,000; fisheries, \$1,000,000; and miscellaneous, \$2,000,000. Exports of minerals fell away \$4,000,000, and agricultural produce \$50,000,000.

Greece gained its independence in 1830, when it was declared a kingdom under the union of Great Britain, France and Russia.

ROSE TEA "is good tea"

BRITISH NAVAL CLEARING THE SEA OF GERMAN SUBMARINES

ARMADA OF 2,300 BOATS IS ENGAGED IN THE WORK

A British Expert on Naval Matters Disputes the Statement that Guarding Against Undersea Craft is Sport, and Graphically Describes the Perils and Hardships of the Work

The First Lord of the Admiralty announced that the losses inflicted upon German submarines have been formidable. By doing so Mr. Balfour crystallized the stories told by naval men who have come in from the North Sea to those who move among them in the anchorage on the eastern seaboard.

Following this an American officer was privileged to give to the public a little definite information, very little and very indelicate, about the work, but to those who so often look upon a great battle squadron at anchor or watch the sudden rush to sea, or again, listen to the stories which carry to the fringe of an action, and who consequently know the secrecy with which it is sought to surround the movement on the sea, it is surprising the emphasis laid on the success of our warfare on the submarine.

With Teutonic bragadoles the Germans, it is popularly supposed, replied to Mr. Balfour's message, with the sinking of the *Essex*, just as they were credited with having answered Mr. Churchill's speech at Liverpool, when he threatened the German fleet if they would not retire into the North Sea clear. The *Essex* was dug out like rats from a hole, with the sinking of the *Hogue* and *Crescy* and the *Aboukir*. But the navy does not believe the Germans give replies on these lines. The stake is too serious. And in the stern game where men are constantly in the jaws of death one cannot get any of playing for fireworks' displays, one is out for results all the time.

"The officers and men of the battleships and armed cruisers are envious of those engaged in submarine hunting, which are regarded as great sport." That statement may have been made, but it is the greatest possible travesty of a dangerous and momentous task exposed life, so much is it so that it is inconceivable to anyone acquainted with the sea that any naval officer or seaman could frame the words.

There are 2,300 trawlers, mine sweepers and other auxiliaries on duty outside the neutral zone keeping the North Sea clear. We always believed there were about 2,000 ships at work around our coast and were matched armadas searching for on the lone waste? What is this quarry that gives the great sport?

Reliable figures are available of how many German submarines were aloft when war was declared. Possibly at the outside, 100, and the stories have been published of submarines built in sections and carried overland—vessels of 1,000 tons, all fitted with most ingeniously adapted and delicate machinery.

To the Germans, we grant, everything is possible, and coming to absolute freak ideas and coming to absolute freaks, the German yards would not turn out in a year more than a large new submarine, and even suppose not a single submarine is being retained outside Kiel, or Heligoland or in the Baltic, in the North Sea have enjoyed great sport and been the envy of the fleet searching for about half a hundred under-water craft. No angling competition and the work was ever more boring or hustling in individual success.

A submarine is a sound, comfortable craft winding lazily through the western Kyles, with a background of blue Scottish mountains; a little music and well cooked, and a good deal of food for the hungry man. What a champion life the sailor leads hunting submarines. No outside, no outside, no outside, keen eyed, clean skinned fellow when ashore. So is the picture in fancy. But what of it in reality?

The smaller craft have their monthly divided up—more than half of the thirty days they are on actual patrol work, but on one day, five, the patrol fleet at their mooring, ready at any moment to go out and reinforce a given unit; the remaining few days they come into the harbor and the men are then on shore leave.

But their work when out is no sport. Take the men who are patrolling given tracks. They do ten miles either way—back and forward, back and forward, no change, no variety—looking watching, ever ready should the skulking foe, who has a million square miles to hide in, suddenly rise in the limited area they guard. Night and day they stand the gun layer, his own master when to fire.

To watch these vessels from land, even at long range, is a tiresome task. What is it to those on board, whose eyes are never relaxed. The watchfulness must never waver. In fine weather life is passable, but recall the dirty, wintry nights they passed through. Where was the sport in this?

Crocker Land a Myth

McMillan Arctic Expedition Returning to New York

Word has just been received by the American Museum of Natural History that Donald B. McMillan and a party of six explorers, who left New York in 1913 to explore and chart what was supposed to be Crocker Land, in the Arctic Ocean, were safe, and that the relief ship *Chester*, later sent with supplies to the McMillan party, reached its destination.

Dr. E. O. Hovey, commander of the McMillan expedition, in a letter dated August 4 and sent by way of Denmark

Do Not Lack Resource

Allies Can Look on Prolongation of Hostilities Without Anxiety

Since France and her allies, in spite of their attachment to peace, were obliged to suffer war, they will prosecute it to the end, and their intimate union will assure them of the resources and right," says Premier Viviani in a declaration published in the magazine *Lectures Pour Tous*.

"France is not a country to be preyed upon," he continues. "She will not lay down her arms until she has re-venge outraged justice, consolidated forever with the fatherland and the provinces ravaged by force, restored her Belgium, and broken Prussian militarism in order to be able to reconstruct upon a foundation of right a regenerated Europe."

"Believing in our social, political and religious principles, our enemies are assigned this country's elements, irreconcilable."

What did they see? Workmen, employers, artisans, peasants, rich and poor men of all parties, all religious beliefs, offering to sacrifice themselves, all fulfilling their duty in defending their territory in the hour of revolution, in defending the liberty of the world. All understood that the prolongation of hostilities meant, for the nation, a great and irreparable loss. The glory is for all; its light illuminates every forehead.

It is not only to our army, whose heroism and efforts in the war that they shall owe victory; it is also to the nation that has been able to accompany that heroism with a union of silence and serenity in critical hours. If these hours seem long, let us continue to think of our country and everything will be easy for us."

Finance Minister Ribot, in the same issue of the magazine, speaking of the issue of finance upon the war, says:

"France will not lack resources to sustain her efforts in the war that she does not seek, but she is determined to pursue without flinching. As far as concerns finance, she can look upon the prolongation of hostilities without anxiety. The end of the conflict will not depend on our resources."

"Let France keep the faith she has inherited. Let her continue to understand her financial duty as she has understood her moral duty and her military duty. She will win the final victory that the world feels to be inevitable and that it awaits in the interest of the liberty of peoples and the civilization of the world."

Victor Augagneur, the French minister of marine, declares:

"The German navy is quite as effectively annihilated as if it were sunk. It is powerless and useless. Consequently, our country need not be troubled by the need of further sacrifices to increase the strength of its navy."

Unite All Resources

Russia, Britain and France Are in Complete Accord

The Russian cabinet of finance has issued the following statement:

"An exchange of views between the ministers of finance of the Allied Powers has confirmed once again, according to information received at the ministry of finance the accord between the governments of Russia, Great Britain and France, who are determined to unite all their resources to bring the present war to a glorious conclusion."

"Russia is assured that the necessary credits for the liquidation of orders placed for purposes of national defense, as well as for the payment of interest on the foreign loans and the foreign loans to the government guaranteed by the state and the people of Russia, will be met by the Russian government under the payment of the Allied powers in America—have previously been adjusted by the credit provided by the Anglo-French loan of \$500,000,000 and other measures contemplated by the allied governments."

At the same time an agreement has been reached between the government of England and the Russian minister of finance, enabling Russian banks enjoying short term credits to financial houses. The principal object of this last measure is to enable Russian bankers to retain possession of their foreign securities.

German Bayonets' Work

Cold Steel Causes Small Percentages of Casualties Among Allies

How little the bayonet is used by the Germans in this war is shown by the fact of the first 1,000 soldiers treated in the hospital at Paignton, England, only six had been wounded by the bayonet.

About 39 per cent. of the shrapnel shell wounded or gun shot wounds were found to be non-perforating.

Not counting fractures, the wounds were located as follows: upper extremity, 12; lower extremity, 24; central and peripheral nerve injuries, 11; circumscribed wounds, 10; lacerations and pneumatic fever were most frequently observed.

The average time elapsing between the injury and the first field dressing of the wound was about six and a half hours. Thirty-five of the 1,000 wounded were unfit to return to duty, and the total return were, on an average, about twenty-three days on sick leave.

Only three of the thousand died.

IS ESTIMATED THAT THE WAR HAS TAKEN OVER TWO MILLION LIVES

WOUNDED NOW NUMBER NEARLY FOUR MILLION

Conservative Minimum Figures Compiled from the Best Available Data, and Presented by an American Military Authority Reveal the Terrible Wastage of the War

Since the great war in Europe started more than 2,000,000 men have been killed; the wounded number nearly 4,000,000, while the total number of prisoners and of the missing is more than 3,000,000. These are conservative minimum figures compiled from the best available data, and made public by Brig. Gen. Francis Vinton Greene, in an address on the war, delivered before the members of the New York State Historical Association.

General Greene is an honor graduate of West Point of the class of 1870, and the author of many standard works on military history. He gave his hearers the benefit of what he called an "intelligent guess" as to the number of men killed in the war, and submitted a table showing the increases of the national indebtedness of the European belligerents. The increase over 1914 approximately is \$29,000,000,000. How much of this is war debt, of course, is problematical. The war cost of the United States is estimated at \$24,000,000,000, while that of the Teutonic allies, with Turkey included, is estimated at \$108,000,000,000. General Greene also discussed the changes in the art of warfare that have made the great struggle not only the most far-reaching in the history of the world, but also the most interesting, from a military point of view, of any war in history. Incidentally, the speaker was asked what in his own opinion he required to make adequate the national defense of the United States.

In the present decade he said there had occurred more important changes in the art of warfare than in the preceding century, in other words, since the first use of gunpowder in warfare.

What these changes in the art of warfare mean is learned by a study of the tables of casualties, financial expenditures and other figures taken from official reports. Summarized they show that on the side of the allies there have been 2,000,000 men killed as compared with 122,230,000 population of the Teutonic nations and Italy, Turkey. The colonies of the allies have a population of 25,500,000 people as compared with 2,500,000 in the colonies that now or did belong to Germany, Austria and Turkey. The total population upon which the allies can draw is 739,000,000 as compared with 155,000,000 in the case of the Emperor William, Franz Josef and the Sultan.

In his discussion of other phases of the war General Greene said that the important part played by the aeroplane, the automobile, the submarine, and the wireless telegraph are for the first time extremely useful in warfare.

"We only dimly perceive, as yet," General Greene said, "the real importance of these agencies and the stupendous scale of actual military operations. The American people are taken by the railroad, the steamship, the electric telegraph, had first come into military use, and had gradually reached their present perfection. It is often been said that had there means been at the disposal of Napoleon he would have defeated the allies. This is more opinion and speculation. But it is a fact that the means of transportation and of communicating intelligence were substantially the same in the time of Napoleon as in the time of Caesar."

"From Napoleon's time to the present the art of war has benefited by all the wonderful improvements in the mechanical arts and sciences; all of which are the result of the war as well as of peace. Instantaneous communication of intelligence, marvellously rapid transportation of troops, the ability to feel and supply unheard of numbers in the field, flying through the air to detect the enemy's movements, swimming under water to destroy the enemy's ships, hurling projectiles of unprecedented size to destroy forts ranging for hundreds upon hundreds of wounded, which but for the automobile would have perished upon the field, these are some of the more important methods of warfare which now for the first time are being used to full effect, and which show a scale of such unprecedented magnitude."

"If, however, we consider these figures relatively to the population and the estimated wealth of the nations engaged in war we find that they are not unprecedented. Per capita the debt is no greater than that of England and France at the close of the Napoleonic wars. Moreover the per capita wealth of the nations engaged in the present war is considerably less in the percentage of accumulated wealth than was the case a hundred years ago, or the European debts a hundred years ago."

"It is of course, within the bounds of possibility that the war may continue until one or more than one of the nations involved becomes hopelessly bankrupt. But all, or nearly all of them, have still vast sources of credit untouched. It is beyond any question a fact that the military operations have not been anywhere restricted by financial considerations. Questions of finance have not made any change in the art of war except as they have contributed through enormous resources of credit to make it possible to carry on military operations on a scale of such unprecedented magnitude."

Fight or Pay

The Good Reasons Why You Ought to Aid the Patriotic Fund

1—You owe to your country, and to the empire.

2—The object of the Canadian Patriotic fund is to make provision for all families of soldiers going from Canada to take part in the present war.

3—Those who have gone to the front are making greater sacrifices than anything we can do at home.

4—An unpaid bill is a risk in the world's history calls for supreme sacrifice on our part. We must do our duty—we must fight or pay.

5—Mr. Eze—My husband is such a thoughtful man.

6—Mr. Wye—So is mine—full of thoughts of his belief.

truth, liberty and for the sacredness of treaties and the given word.

6—If you can go yourself, you can help to make it possible for others to go by guaranteeing that their families will be provided for in the absence.

7—The object of the Canadian Patriotic fund is to make provision for all families of soldiers going from Canada to take part in the present war.

8—Those who have gone to the front are making greater sacrifices than anything we can do at home.

9—An unpaid bill is a risk in the world's history calls for supreme sacrifice on our part. We must do our duty—we must fight or pay.

5—Mr. Eze—My husband is such a thoughtful man.

6—Mr. Wye—So is mine—full of thoughts of his belief.
